

Enterprise SecOps is Under Pressure

SEE ALL THREATS

across the entire defense surface

INVESTIGATE IN SECONDS

lowering your mean time to resolution

CAPTURE KNOWLEDGE

to enrich data and automate processes

ACCELERATE DECISIONS

with clear, actionable insight

Growth in cloud technologies and new business applications is driving exponential data growth and expanding the defense surface; this growth is directly impacting security operations. According to an ESG¹ research survey, 72% of cybersecurity professionals said cybersecurity analytics and operations are more difficult now than they were two years ago. Clearly, SOCs are struggling to meet the demands of the evolving threat landscape. Analysts gain access to only a portion of the data story – either due to high costs or inability to scale. Traditional rules-based security solutions and manual workflows fail to keep pace with sophisticated actors and advanced threat campaigns. Disconnected expertise across the community leads to a lack of centralized threat intelligence. The volume of alerts and the repetitive nature of the SOC analyst's role makes it difficult to retain top talent.

The result: the SOC must undergo a transformation to more effectively empower and support analysts.

How Devo is Supporting the SOC

Today, all data is security data – and Devo Security Operations helps turn that data into actionable threat insight. Devo empowers your analysts with visibility, speed, and practitioner-led workflows across security operations. Our highly scalable, SaaS-native security analytics solution collects, enhances, analyzes, and visualizes, to make all your machine data actionable. The solution's advanced analytics enable you to more quickly dig through data to hunt, investigate, and respond to threats. Devo Security Operations can function as a stand-alone security analytics solution, or it can extend and complement existing security solutions and tools, like a SIEM.

See All Threats

How do you manage the number and advanced nature of modern attacks with only part of the threat story? Empower your team with a complete line of sight across your data landscape to drive analytics and transform insight into real-time visualization and action. Devo Security Operations ingests and visualizes all data, from traditional security data to non-traditional data sources and threat intelligence feeds, to develop the full threat story. Devo provides an interactive drag-and-drop interface to organize and correlate data, create customized dashboards to monitor key security metrics, and interact with streaming data. This enables you to speed exploration and drill down to quickly hunt and investigate advanced threats, understand hidden relationships, and enable rapid detection and response.

Investigate in Seconds

Remediation and recovery plans are only as effective as the accuracy and immediacy of the insight underpinning those decisions. However, sifting through large volumes of data to identify real threats wastes time and is extremely difficult. The net: you are left at risk from multiple threat vectors, while your analysts are struggling to identify the true source of an issue. Help your SOC analyst be more agile and creative with Devo Security Operations. Devo pairs the industry's fastest ingest and query speeds with machine learning, empowering your team to quickly pivot from detection to investigation. Instantly analyze streaming and historical data to reveal new attacks and historical threat patterns; enrich data with threat intelligence for a deeper understanding of your adversaries; and compare results against industry frameworks for threat profiling and mapping.

Capture Knowledge

Threat intelligence formalizes your understanding of adversaries by documenting behavioral patterns, indicators, attack pathways to provide actionable guidance to effectively combat threats. Devo Security Operations integrates streaming data from open or proprietary intelligence feeds and also provides a collection of out-of-the-box threat intelligence feeds to enrich your data with context. You can then privately share your intelligence with other Devo customers, or with the larger information security industry. By leveraging Devo's threat intelligence integrations, you limit the unknowns to more accurately test evolving hypotheses, establish defense mechanisms, react to ongoing breaches, and transform insight into automated processes and actions.

Accelerate Decisions

Security Operations works against the clock. It takes 66 days on average to contain a breach – and every second counts. Devo's superior speed, scale, and advanced analytics help to accelerate event triage and response decision-making by providing more accurate and actionable information to your analysts. Devo Security Operations provides real-time access to all your data, regardless of source or type of data. Establish alerts to monitor events and patterns, and drill down to the raw data to investigate the potential threat. Imagine: You can run queries across petabytes of data, validate threats, establish the impact to your organization, visualize the threat campaign, determine a response plan to close threat pathways, and establish repeatable alert triggers and workflows – all in one solution.

How Customers are Leveraging Devo

Leading enterprises are using Devo Security Operations to expand their SOC strategy, reduce threats, cut operational costs, empower analyst creativity, and drive decision-making. One of our customers – a leading retail manufacturer with a mature SOC and terabytes of data generated every day – was struggling to scale operations and combat malicious bots. With Devo, the enterprise was able to ingest all its data for complete visibility; detect and alert to malicious bots in seconds, instead of hours; and scale security operations without degrading performance.

Take Your SOC to the Next Level

The SOC is under ever-increasing pressure to meet the demands of data growth and threat sophistication, and must evolve to support analysts' creativity with data analytics and automation. Devo sets a new standard for speed, scale, and ease of security operations. Bringing Devo Security Operations into your SOC will improve the analyst experience and enable the SecOps team to flex its security muscles.

ABOUT DEVO

Devo Technology is the data engine behind today's digitally-driven enterprises, helping organizations maximize the economic and operational value of their machine data. The Devo Data Operations Platform delivers real-time analytics on streaming and historical data to turn machine data into actions that help enterprises achieve sustained performance and growth. By collecting, enhancing and analyzing machine data, Devo provides business-driving insights for IT, security, and business teams at the world's largest organizations.
