

# Devo Multitenancy for Enterprises

Gain fast, secure, self-service access to data across multiple domains

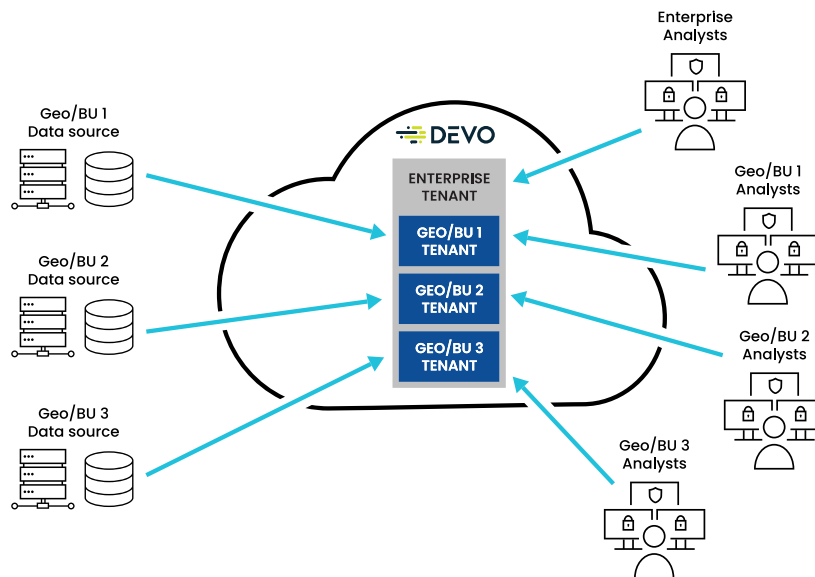

SOLUTION BRIEF

## CENTRALIZE LOGGING AND SECURITY ANALYTICS ACROSS THE ORGANIZATION WHILE MEETING DATA PRIVACY AND SECURITY REQUIREMENTS

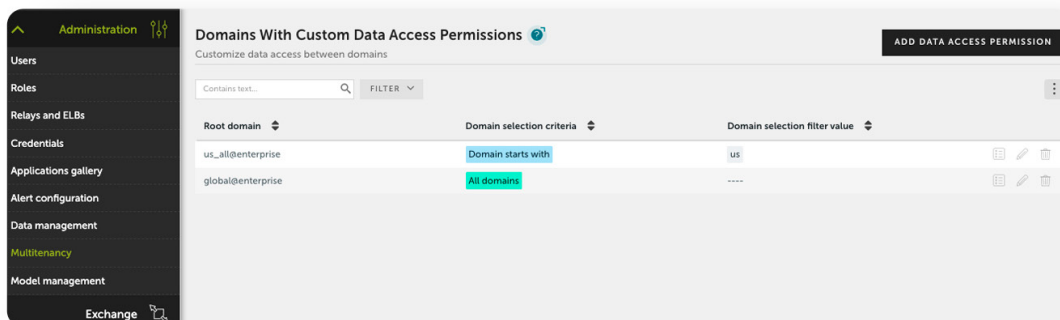

Many large enterprises need to keep data segregated across different locations and business units to meet data residency and compliance requirements. At the same time, they need to give their security teams the ability to manage and access data across multiple tenants, while consolidating their logging and security analytics capabilities into a single platform.

The Devo Platform's multitenancy capability enables enterprises to centralize their logging and security analytics capabilities into a single platform across any geographic region in alignment with their business unit structure, all while maintaining the residency and compliance requirements of their data. It enables enterprises to centrally provision, monitor, manage and query an unlimited number of tenants.

Devo's multitenancy capability offers universal, secure data access across multiple tenants.

## MAXIMIZE YOUR INVESTMENT IN THE DEVO PLATFORM WITH DATA-DRIVEN MULTITENANCY

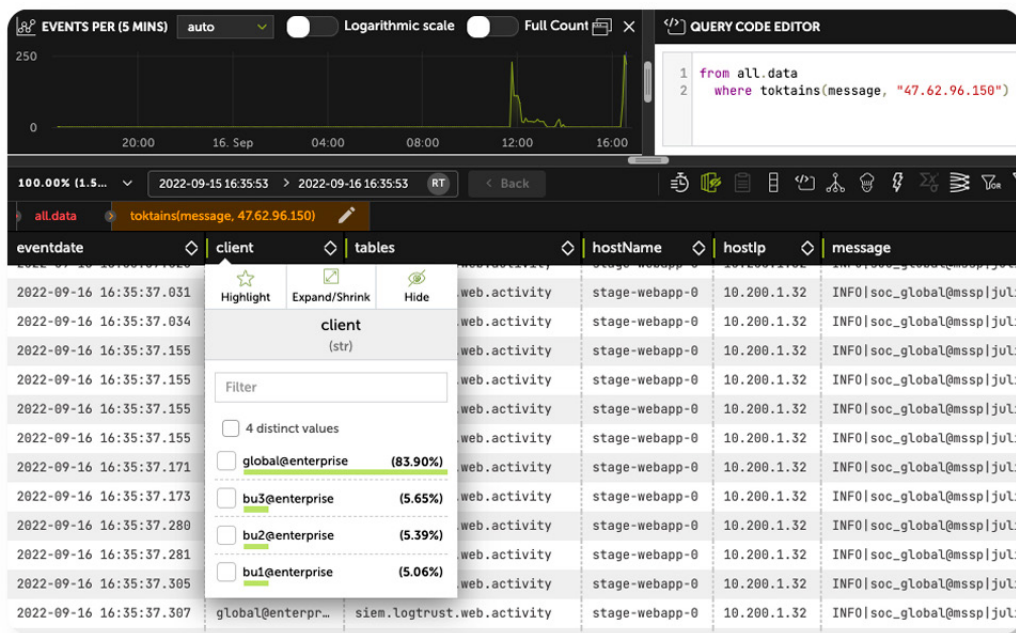

Users have the ability to provision and configure data access for multiple tenants using self-service capabilities.

The Devo Platform's multitenancy provides:

- **Simple, cloud-native SaaS implementation:** Provision an unlimited number of tenants within minutes using the same cloud infrastructure, which reduces TCO and increases time to value.
- **Self-service capabilities:** Easily provision and configure data access for tenants in a matter of minutes, which enables rapid onboarding.
- **Secure and global data access:** Obtain global access to individual tenants from a parent tenant, which provides complete visibility for security teams while maintaining data residency and compliance.
- **Speed and flexibility:** Leverage the unparalleled speed, scalability and clarity of the Devo Platform while accessing complete sets of data via global tenants, which reduces MTTR and increases productivity.

## POWERFULLY SCALE YOUR BUSINESS PRODUCTIVITY WITH DEVO

Global search capabilities help security teams hunt for IOCs across multiple tenants.

With Devo's multitenancy capability, enterprises no longer have the burden of maintaining multiple security and logging platforms. Now teams have access to identical features and functionality, while securely managing their data and maintaining compliance. As a result, organizations can lower costs and focus on business goals while realizing the following benefits:

- **Enhanced threat-hunting capabilities:** Security teams can search for IOCs across multiple tenants via global search, which enables rapid identification of threats across the entire attack surface, boosting analyst productivity.
- **Increased adoption of the Devo Platform:** Enterprises can easily implement multitenancy to deploy the Devo Platform for multiple use cases across business units, which lowers costs, drives data compliance and enables consistent security operations practices across the entire organization.

- **Customizable solution throughout the organization:** Enterprises can provision and configure multitenancy to enable their security organizations to efficiently maintain data residency and compliance — all while enabling security teams to identify threats, respond to incidents, and prevent attacks across the entire infrastructure.
- **Reduced security risks:** More efficient deployment of multi-tenants provides complete visibility across all domains and improves data security, which reduces exposure to external and/or internal breaches across the entire organization.
- **Accelerated time to value:** Rapid adoption and onboarding of new organizations for use cases such as acquisitions enables enterprises to leverage the full benefits of the Devo Platform in a matter of hours without the hassle of deploying additional infrastructure, which lowers costs and improves efficiency.
