

Devo Multitenancy for Managed Security Service Providers (MSSP)

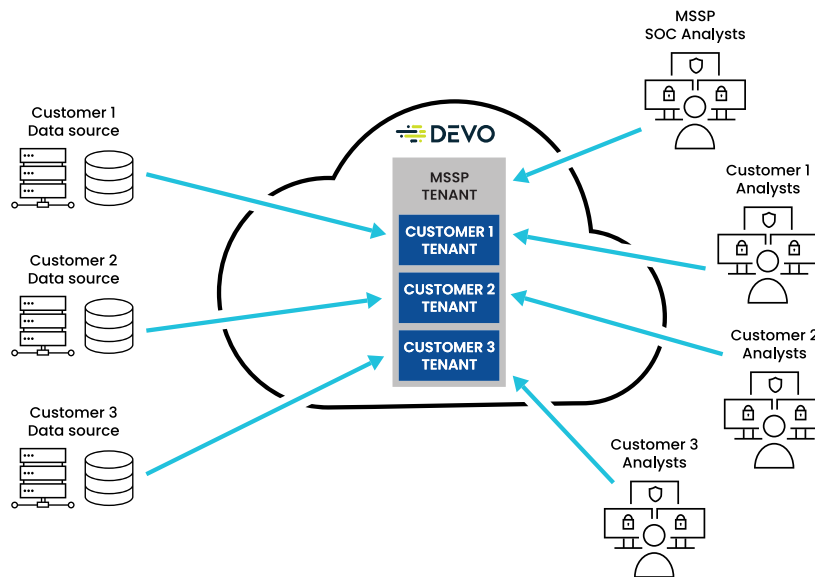

Gain fast, secure, self-service access to data across multiple domains

SOLUTION BRIEF

DELIVER DIFFERENTIATED SERVICES TO CUSTOMERS WHILE FULLY COMPLYING WITH DATA PRIVACY AND SECURITY REQUIREMENTS

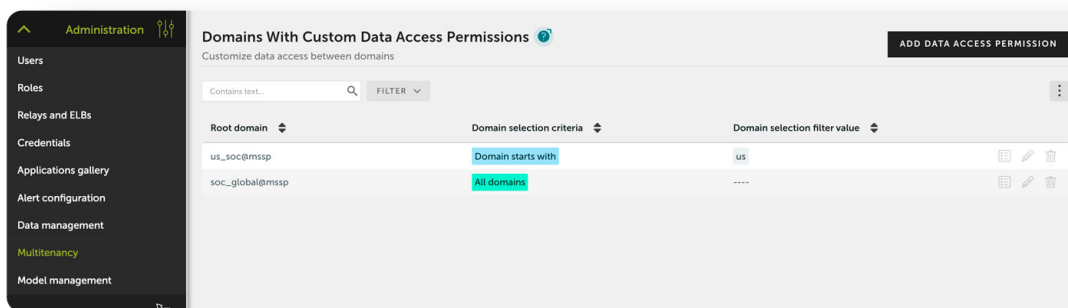

MSSPs and organizations that provide outsourced security operations need the ability to configure, secure, and oversee multiple tenants for each of their customers. Their security teams need the ability to manage and access data across multiple tenants while maintaining complete visibility across the entire infrastructure. At the same time, they must keep data segregated to maintain security and meet data residency and compliance requirements.

Devo's multitenancy capability enables MSSPs to maintain complete visibility into the customer data they manage while safeguarding its privacy and security and maintaining data residency and compliance requirements. It enables MSSPs to centrally provision, monitor, manage and query an unlimited number of tenants. This helps MSSPs deliver differentiated services to customers easily and cost-effectively.

Devo's multitenancy capability offers universal, secure data access across multiple tenants.

MAXIMIZE YOUR INVESTMENT IN THE DEVO PLATFORM WITH DATA-DRIVEN MULTITENANCY

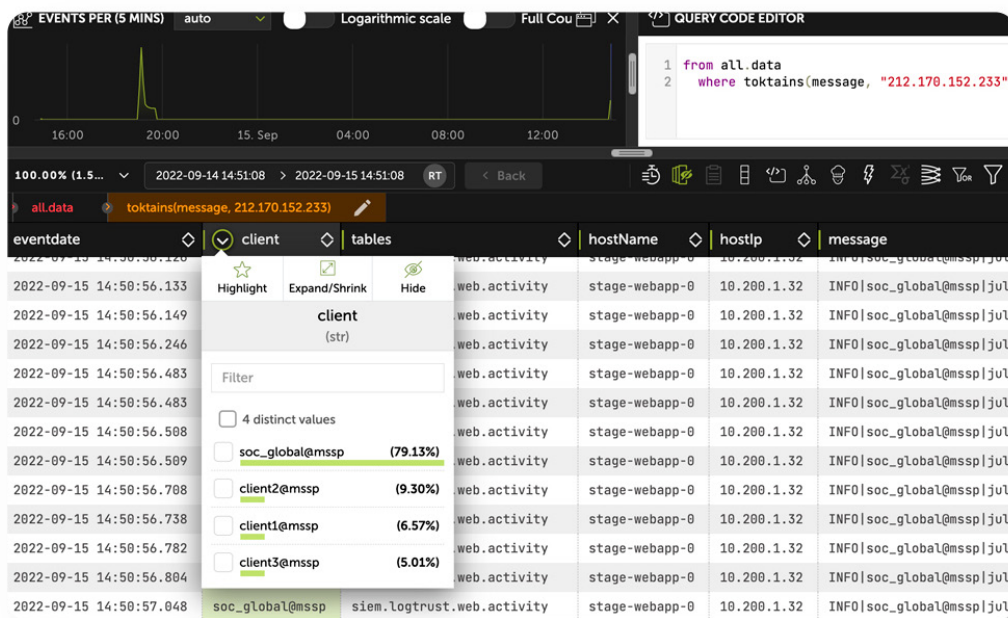

Users have the ability to provision and configure data access for multiple tenants using self-service capabilities.

The Devo Platform’s multitenancy provides:

- **Simple, cloud-native SaaS implementation:** Provision an unlimited number of tenants within minutes in the same cloud infrastructure, which reduces TCO and increases time to value.
- **Self-service capabilities:** Easily provision and configure data access for tenants in a matter of minutes, which enables rapid customer onboarding.
- **Secure and global data access:** Obtain global access to individual tenants from a parent tenant, which provides complete visibility for MSSP teams while protecting customer information.
- **Speed and flexibility:** Leverage the unparalleled speed, scalability and clarity of the Devo Platform while accessing complete sets of customer data via global tenants, which reduces MTTR and increases productivity.

POWERFULLY SCALE YOUR BUSINESS PRODUCTIVITY WITH DEVO

Global search capabilities help security teams hunt for IOCs across multiple tenants.

With Devo’s multitenancy capability, customers no longer have the burden of provisioning and managing individual infrastructures. Now MSSPs and customers have access to identical features and functionality, while data is available and secure. As a result, MSSPs and their customers can lower costs and focus on their business goals while realizing the following benefits:

- **Enhanced threat-hunting capabilities:** Security teams have the ability to search for IOCs across multiple tenants via global search, which enables rapid identification of threats across the entire attack surface, boosting analyst productivity.
- **Customizable solution for your customer needs:** MSSPs can provision and configure multitenancy to meet their customers’ security operations needs while efficiently managing and safeguarding their data – all while giving security teams the ability to identify threats, respond to incidents, and prevent attacks across the entire infrastructure.

- **Reduced security risk:** More efficient deployment of multitenancy provides complete visibility across all domains and improved data security, which maintains data residency and compliance while reducing customers' exposure to external and/or internal breaches.
- **Accelerated time to value:** Rapid adoption and onboarding of new customers give MSSPs the ability to leverage the full benefits of the Devo Platform in a matter of hours without the hassle of deploying additional infrastructure, which lowers costs and improves efficiency.
