

### ACHIEVE FASTER TIME TO VALUE FROM YOUR DEVO DEPLOYMENT WITH VALUABLE CONTENT

Obtaining visibility into your organization can be challenging because data is often spread across on-premises, cloud, or hybrid environments. Also, your organization is unique – from its goals and objectives to its infrastructure – making it difficult for legacy SIEM and logging solutions to fit your needs right out of the box.

With the ever-growing volume of data generated by applications, devices, servers and tools, you need a solution that provides the flexibility to centralize your data regardless of sources, lets you query it in real time, and enables you to analyze and visualize the data to gain actionable insights to keep your organization secure.

The Devo Platform, the cloud-native logging and security analytics platform, empowers you with the speed, scale and clarity to achieve full visibility, while Devo Exchange provides the content you need to accelerate your implementation of impactful security analytics.

Devo Exchange is a vibrant community-based marketplace that extends the capabilities of your security team by giving them on-demand access to a catalog of Devo-curated content created by Devo, its partners, and the greater security community.

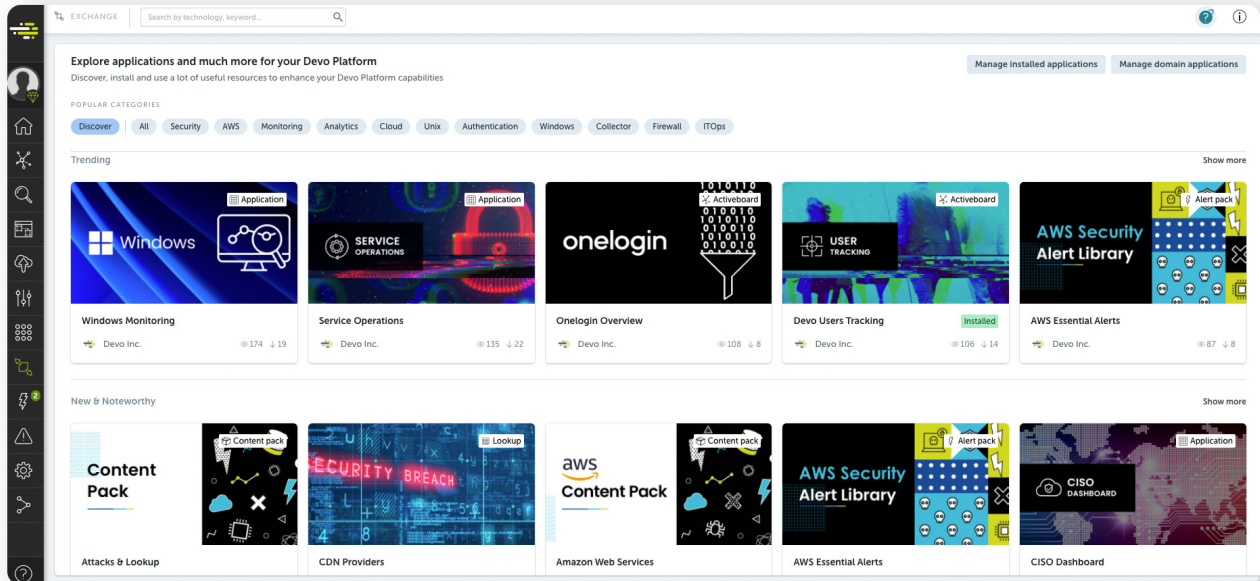

### SAVE VALUABLE TIME AND RESOURCES BY LEVERAGING A CATALOG OF CONTENT READY FOR YOUR TEAM TO DEPLOY

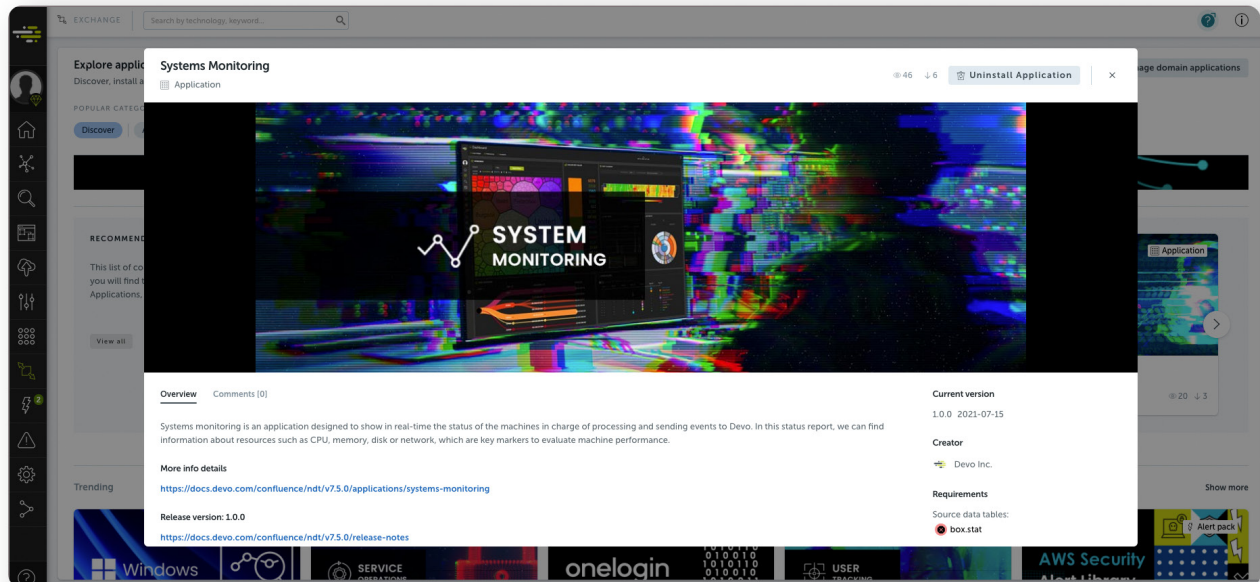

Devo Exchange reduces the time your security team needs to spend creating custom content and accelerates the deployment of impactful use cases by giving the team access to vetted Devo and community content relevant to your security ecosystem, including:

-  Expert-created security analytics, including alerts to detect important threat signals
-  Interactive use-case-based applications to access deeper insights
-  Insightful visualizations powered by Devo Activeboards to interact with and explore your data
-  Enrichments through lookups that provide real-time context to data, enabling better understanding of threats and accelerating investigations

Launch Devo Exchange right from the Devo Platform by navigating to the Exchange icon on the main menu. Once in the Exchange, you will see all available content, which you can easily explore by leveraging the filters and tags at the top or searching by name.

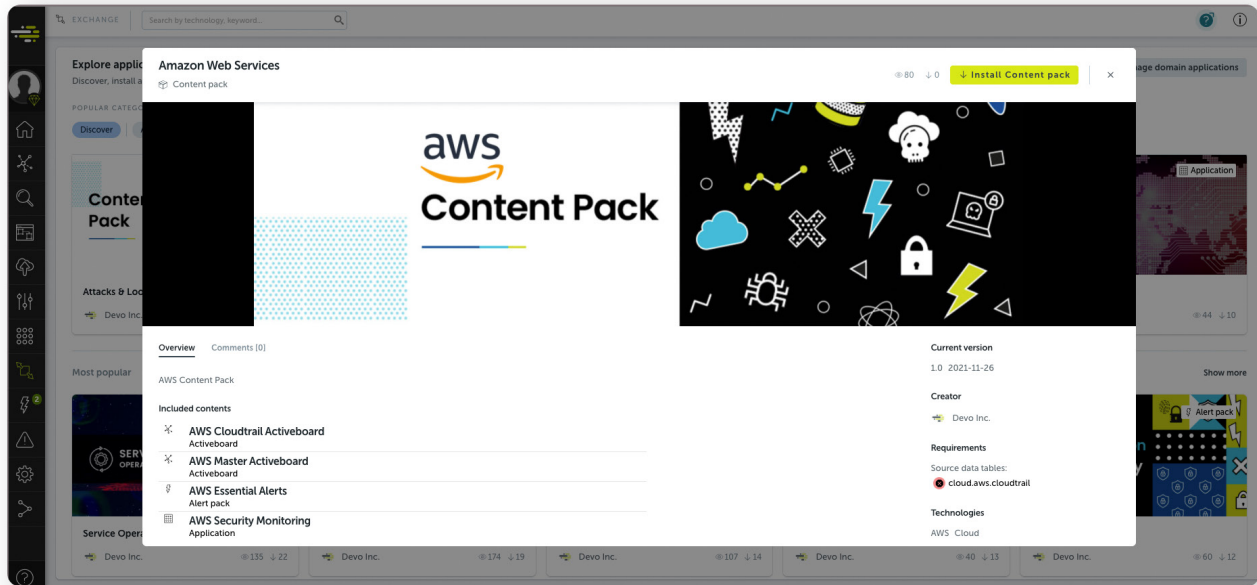

For more information about each piece of content, you can view additional details that provide the type of content, a brief description, its creator, and requirements such as data sources necessary to deploy it. Once you determine you want to install the content, you can easily do so by clicking the button. You can manage all your installed content from the "Manage installed applications" section of the Exchange.

## MAXIMIZE YOUR THIRD-PARTY IT AND SECURITY TOOLS AND QUICKLY DEPLOY USE CASES

The Devo Platform makes it easier to solve for more use cases by enabling you to ingest data from any on-premises or cloud source. And with numerous data connectors, data ingestion is a snap. Devo Exchange brings your data to life with must-have applications, alerts, lookups and Activeboards, providing a single Devo deployment that maximizes the value of your third-party IT and security tools.

You also can increase the pace at which your team deploys new use cases with must-have applications, Activeboards, lookups and alerts that are organized into convenient Content Packs. A Content Pack aligns with a specific use case and you can choose to install its contents to suit your objectives and environment.

With a ton of high-value content available now and a fast-growing catalog, Devo Exchange enables you to continuously realize even more value from Devo, all while reducing your security team's content-engineering workload.

### Are you ready to explore Devo Exchange?

Contact your sales representative to schedule a Devo Platform demo or visit [Devo Docs](#) for more info.
