# Better Together: Devo and AWS

DEVO

+

aws

As organizations continue to move their workloads to the cloud, the attack surface concurrently expands with this new growth. This means organizations need not only the right people but intelligent automation to monitor and detect these new threats in real time.

Built on AWS's robust cloud infrastructure, Devo optimizes threat detection and incident response (TDIR) through a unified intelligent SIEM, SOAR, and UEBA platform. This dynamic collaboration enhances the efficiency of security operations and provides a comprehensive view of the cloud environment, allowing businesses to stay one step ahead of potential risks.

The Devo Platform and Intelligent SIEM combine integrated SIEM, UEBA, SOAR, TDIR, and AI, delivering a significant leap forward in SecOps Management. Running on AWS and connecting directly to the AWS Security Hub and AWS Security Data Lake, Devo's Multi-layer AI, coupled with behavioral analytics, improves threat detection while substantially reducing MTTR times. AI-driven task automation complements analysts' knowledge with ML-based threat identification and response techniques. A cloud-native SaaS platform ingests data at machine speed and scales dynamically at a predictable cost while delivering value as a zero administrator asset. Resources can be repurposed for threat detection or returned to the business
## Use Cases

**UEBA**

**SIEM**

**SOAR**

**AI**

## Customer Challenge

Today, customers need not only real-time detection and the ability to reduce noisy alerts but also the scalability to match their growing data needs, all while balancing costs.

## Our Solution

With a focus on AI, The Devo Platform facilitates the fastest detection and response times while reducing TCO by 20-50%. The Devo Intelligent SIEM transforms security operations with 400 days of hot data storage.

## Why are we different?

Built on top of AWS, Devo delivers a  true Cloud-Native SIEM, which combines the power of people with intelligent automation to defend expanding attack surfaces. Devo delivers on the promise of Speed, Scale, and AI for transformative security.

## Programs and Competencies

Devo is an AWS-certified Advanced partner.

- 2020 Partner of The Year
- Security Competency
- SRRP - Saas Revenue Recognition Program
- Global Startup

- Workload Migration Program
- AWS Marketplace
- Public Sector Partner
